

Polyhedral Dice Debiasing Worksheet

- 1

Set the first roll
Roll all five dice.
Place one marker on each row.
- 2

Roll the dice again
Keep the markers in place.
Compare each new result.
- 3

Place each die
L: second roll is lower.
H: second roll is higher.
- 4

Resolve ties
If equal, reroll that die twice.
Move marker after the first.
Keep the other four results.

Use the fixed die order below. Any five small markers or tokens will work.

	FIRST ROLL: PLACE MARKER	SECOND ROLL: PLACE DIE
Die 1 D6	1 2 3 4 5 6	L H
Die 2 D8	1 2 3 4 5 6 7 8	L H
Die 3 D10 0 means 10	1 2 3 4 5 6 7 8 9 0/10	L H
Die 4 D12	1 2 3 4 5 6 7 8 9 10 11 12	L H
Die 5 D20	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 1-10 11-20	L H

Keep the markers and dice in place while you read D6 through D20 on page 2.

Use markers no wider than the track spaces (about 1/2 inch or 12 mm). Clear the tracks and L/H pads after each character.

Polyhedral L/H Character Tree

Read the dice in this fixed order: D6, D8, D10, D12, then D20.

second roll is LOWER than the first

second roll is HIGHER than the first

Example: D6-D20 is L,H,L,H,H which leads to T
